  - Blanching
  - Numbness/tingling
  - Nasal obstruction from tissue edema

# RhinAer® Stylus – Post Procedure

## Post-procedure:

- Avoid blowing your nose for the 1st week following your procedure.
- Your doctor may recommend keeping the inside of your nose moist using a nasal saline spray.
- You may experience temporary increased congestion, increased sensitivity, and/or pain during the healing process.
- You may have some mild bloody discharge for the first 3-5 days following the procedure, especially after a nasal rinse. Call your doctor immediately if you have any bright red bleeding or the bleeding is heavy.
- Most patients begin to see improvement between 2 and 6 weeks following the treatment.
- Most patients can return to normal activities the same day.

## Potential adverse effects<sup>1</sup> related to the use of radiofrequency energy on tissue in the nasal airway include:

- Infection
- Mucosal necrosis
- External deformity
- Temporary swelling/edema
- Blanching (generalized whiteness)
- Temporary soreness/pain
- Bruising including around the orbital area (black eyes) Bleeding
- Scar formation w/ increased obstruction
- Sensory changes at treatment site
- Inflammation/generalized redness
- Temporary numbness/tingling
